Project Word Finder Game   Page History   Clone URL

Implement an socially enabled word search game. The principle of the game is simple. The user is presented with a matrix of letters and he
has to find as many words in the matrix as possible in a given period of time.

The game should be social in the sense that a player can choose to play a new board, or can choose to play on the same board on which
his friends have played before. In this second case, his score will be ranked in comparison with his friends.

Comparable products   – google docs → google.ch konto

Word Hero game.

User Stories

- The user plays a game and as he finds words he can see in real time his score increasing and the timer decreasing
- The user can choose the language in which he wants to find words
- The user can import a set of predefined words in the game
- The user sees his ranking on a board in the last day, month, year
- The user adds a friend to his network
- The user rotates the matrix of letters — same structure

Last edited by Mircea Filip Lungu, 7 days ago   rotate steps 90 degrees, not ~~turning when~~

rotate matrix

what do you mean with... (clarification)   not turning when turning phone.

what happens if... (unmentioned details)

© 2013 GitHub, Inc.   Terms Privacy Security Contact   ○   Status API Training Shop Blog About

do you also expect us to... (define the scope of the app)
- Enter name and start playing (and email) no password
- Hall of fame 5 matrix, words list which found most
- size of matrix ? 7x7 (define different sizes?)
- play simultaneously or one after another?

(?) _____

- How many words?
- Which languages? (english and german)

- show-points total (update)
        - how many words found

- customized dictionaries
- at least 20 words to find per matrix
- statistics, share statistics — board stat, friends stat
                                  word stat
- if the device interrupts (call, sms) → pause (same state)
- Share word lists with friends
- add friends from social media (facebook)
- share results on facebook / email

Matrix 7x7

5min Timer

Letters different Values

see number of words (out of [...])

Add words / select from dictionary

→ create new „dictionary"

Put words inside

Pans if call / interuption (no pause button)

share wordlists/sets

Languages: En / ger + others

(same trends from TB)

Add per e-mail

Statistics (Points / Time).

hall of fame

Statistics on words (always found this word, never the other)

no passwords / e-mail for identification
